Lucas Augusto Muniz Menezes

Senior Software Engineer | TypeScript, Node.js, NestJS | Distributed Systems & Security
Osasco, SP, Brazil (open to remote) | +55 11 96175-0560 | lukascass@gmail.com | linkedin.com/in/meneluca | menelucas.com

PROFESSIONAL SUMMARY

Senior Software Engineer building backend-heavy systems with TypeScript, Node.js and NestJS. At Blaze (regulated iGaming), I was the primary engineer behind a multi-tenant KYC platform built from scratch, owning architecture, authentication, authorization, auditability, observability and testing. Also worked on AML and risk-monitoring systems over a base of ~3M users, improving performance by up to 36%. Experienced with distributed systems, event-driven architecture, PostgreSQL, Redis, Kafka and AWS. Previously built tax-compliance ERPs with electronic invoicing (NF-e).

TECHNICAL SKILLS

Core: TypeScript, JavaScript, Node.js, NestJS, React, Next.js, PostgreSQL, Redis, Apache Kafka, AWS
Back-end and architecture: REST APIs, GraphQL, OpenAPI, Zod, microservices, event-driven architecture, multi-tenancy, outbox pattern, TypeORM, Drizzle, MCP (AI)
Security and DevOps: OAuth 2.0, JWT, MFA, RBAC, Docker, GitHub Actions, CI/CD, AWS (EC2, S3, SNS, SQS), observability (Datadog)
Testing and front-end: Jest, Vitest, Supertest, Testcontainers, TanStack Query, Tailwind CSS, Storybook, Electron
Domain: KYC, AML, risk management, regulated iGaming, tax and electronic invoicing (NF-e)
Languages: Portuguese (native), English (fluent), Spanish (intermediate)

PROFESSIONAL EXPERIENCE

Senior Software Engineer | **Blaze** | 02/2026 - 09/2026 | Remote (contractor)
Stack: TypeScript, NestJS, Next.js, React, PostgreSQL, Drizzle, Redis, Kafka, GraphQL, AWS (EC2, S3, SNS, SQS), Datadog

- Owned the architecture and implementation of critical identity, compliance and risk services in NestJS, from domain and data modeling to security, observability (Datadog) and testing. On a team of 5 developers (3 senior, 2 junior) and a PM, contributed to technical direction through code reviews, task breakdown with the PM and mentoring of the 2 junior developers.
- **Multi-tenant KYC platform (built from scratch; primary author):** Designed the platform core: a modular, multi-tenant identity verification service built to be sold to other companies, with per-tenant data isolation in PostgreSQL (TypeORM) and an immutable audit trail published through SNS/SQS using the outbox pattern.
- Built authentication (login, MFA, JWT sessions, API keys) and role-based access control (RBAC) for client companies, with Redis caching, hardened against session hijacking and brute force, and covered by unit, integration (Testcontainers) and end-to-end tests.
- **Back-office, risk monitoring and AML:** Implemented anti-fraud AML rules (excessive winnings, multiple bank accounts, source of funds), triggered by platform events and by a daily routine over a base of about 3 million users, with audit events published to Kafka and stored by an audit microservice.
- Refactored the risk-monitoring endpoint, reducing response time by 26–36% in benchmarks over datasets of up to 3M records, and sped up the back-office dashboard by parallelizing requests.
- Built a new dashboard for the compliance team from scratch to monitor players, alerts and transactions (MFA, role-based access, Storybook design system), with over 100 unit and end-to-end tests.
- Built internal tools: an Electron app for service health and AWS deployments, and a DevOps request tool integrated with Jira via OAuth 2.0 and with AI assistants via MCP.

Mid-level Full Stack Developer | **Windel Sistemas** | 02/2025 - 01/2026 | Caxias do Sul, Brazil
Stack: TypeScript, Node.js, Next.js, React, Zod, Jest, AWS (EC2, S3)

- Contributed to the ERP microservices architecture and integrated it with Nuvemshop and tax APIs, expanding sales and invoicing automation.
- Set up backend unit tests (Jest), API tests (Postman) and Zod-validated DTOs.

Full Stack Developer | **Cia Sistemas** | 11/2023 - 12/2024 | Caxias do Sul, Brazil
Stack: Node.js, Next.js, React, PostgreSQL, Sequelize, Jest

- Built a tax-compliance ERP with Node.js, React, PostgreSQL and Sequelize, automating tax calculation, electronic invoicing (NF-e) and tax obligation tracking, with integrations to tax APIs and other management systems and automated tests in Jest.

Full Stack Developer | **Moderniza Group** | 10/2022 - 06/2023 | Caxias do Sul, Brazil
Stack: Node.js, Express, Next.js, React, Redux Toolkit

- Built a unified platform integrating internal systems with React, Node.js, Express and Redux Toolkit.

Software Development Intern | **Central IT** | 11/2021 - 10/2022 | Caxias do Sul, Brazil
Stack: TypeScript, Next.js, React, Socket.io, Docker

- Built a real-time chatbot platform with React, TypeScript, Socket.io and Docker.

PROJECTS

iPsiq | Co-founder and full stack engineer | 10/2026 - present

- Platform in development for scheduling and paying for mental health consultations (NestJS, React, PostgreSQL), with payment split via Asaas. Details and screens at menelucas.com/en/projects.

EDUCATION

Associate Degree in Systems Analysis and Development | **University of Caxias do Sul (UCS)** | In progress
